1	Introduction	1
1.1	Background and problem definition	1
1.2	State of the art	2
1.2.1	Advanced wastewater treatment for micropollutant removal	2
1.2.2	Adsorption	4
1.2.3	Tertiary filtration	9
1.2.4	Options for activated carbon application	10
1.3	Research needs	13
1.4	Outline of the thesis	13
2	Lab-scale evaluation of PAC and ozone for micropollutant removal	15
2.1	Introduction	15
2.2	Materials and methods	18
2.2.1	Experiments	18
2.2.2	Analytical methods	18
2.3	Results and discussion	19
2.3.1	Characterization of WWTP effluents	19
2.3.2	Adsorptive OMP removal with PAC	20
2.3.3	Comparison of PAC and ozone	21
2.3.4	Influence of DOC concentrations on OMP removal efficiency	23
2.3.5	Correlation between OMPs and UV ₂₅₄ absorption	25
2.4	Conclusions	26
3	Impacts of coagulation on PAC adsorption	29
3.1	Introduction	29
3.2	Materials and methods	31
3.2.1	Experiments	31
3.2.2	Analytical methods	33
3.3	Results and discussion	34
3.3.1	Influence of coagulation and adsorption on DOM composition	34
3.3.2	Influence of dosing sequence in combined treatment	35
3.3.3	Correlation between UVA ₂₅₄ and micropollutant removal in combined applications	38
3.4	Conclusions	40

4	Optimization of PAC dosing to deep-bed filtration	43
4.1	Introduction	43
4.2	Materials and methods	45
4.2.1	Experiments	45
4.2.2	Analytical methods	47
4.3	Results and discussion	47
4.3.1	Continuous PAC dosing	47
4.3.2	Single-pulse PAC addition	49
4.3.3	Comparison of continuous and single-pulse PAC dosing	52
4.3.4	Dosing optimization	52
4.4	Conclusions	55
5	Combining PAC adsorption with advanced phosphorus removal in tertiary filtration	57
5.1	Introduction	57
5.2	Materials and methods	59
5.2.1	Pilot experiments	59
5.2.2	Batch experiments	60
5.2.3	Analytical methods	60
5.3	Results and discussion	60
5.3.1	Filter performance	60
5.3.2	Organic sum parameters	65
5.3.3	Micropollutants	65
5.3.4	Comparison with adsorption batch experiments	69
5.4	Conclusions	70
6	Real-time micropollutant removal control by UVA₂₅₄ measurements	73
6.1	Introduction	73
6.2	Materials and methods	75
6.2.1	Batch experiments	75
6.2.2	Pilot experiments	75
6.2.3	Analytical methods	76
6.3	Results and discussion	76
6.3.1	Correlation between UVA ₂₅₄ and micropollutant removal	76
6.3.2	Real-time monitoring of PAC dosing optimization	79
6.3.3	Real-time adjustment of PAC dosing according to differential UVA ₂₅₄ measurements	81
6.4	Conclusions	82
7	Combination of GAC adsorption and deep-bed filtration	85
7.1	Introduction	86

7.2	Materials and methods	87
7.2.1	Pilot GAC filter	87
7.2.2	Analytical methods	89
7.3	Results and discussion	90
7.3.1	GAC as filter material in deep-bed filtration	90
7.3.2	DOC and micropollutant removal	93
7.3.3	Comparison with direct PAC addition	98
7.4	Conclusions	100
8	General discussion	103
8.1	Efficiency of micropollutant removal in a combined adsorption/filtration treatment step	103
8.2	Effects of activated carbon integration on tertiary filtration	105
8.3	Monitoring OMP removal under changing water qualities	106
8.4	Implications for large-scale implementations	107
