Acknowledgment	III
Abstract	V
Zusammenfassung	VII
List of publications	IX
List of figures	XII
List of abbreviations	XIV
1. Introduction	1
2. Background	5
2.1. <i>Cactaceae</i>	5
2.2. <i>Opuntia</i> spp	9
2.3. <i>Opuntia ficus-indica</i> and <i>Opuntia dillenii</i> fruits	16
2.3.1. General description of fruits	18
2.3.2. General composition of fruits	19
2.3.3. Selected technofunctional properties of fruits	20
2.3.4. Chemical composition of fruits	22
2.3.4.1. Moisture	22
2.3.4.2. Sugars	22
2.3.4.3. Dietary fibers	23
2.3.4.4. Nitrogenous substances	24
2.3.4.5. Fatty substances	25
2.3.4.6. Minerals	25
2.3.4.7. Vitamins	26
2.3.5. Predominant bioactive compounds	27
2.3.5.1. Vitamin C	27
2.3.5.2. Betalains	29
2.3.5.3. Phenolic compounds	32
3. Motivation and the aims of study	37
4. Description of publications and the main outcomes	39
5. Publications	52

5.1. Identification and quantification of flavonol aglycons in cactus pear (<i>Opuntia ficus-indica</i>) fruit using a commercial pectinase and cellulase preparation	(i)
5.2. Influence of cultivar and origin on the flavonol profile of fruits and cladodes from cactus <i>Opuntia ficus-indica</i>	(ii)
5.3. Flavonol profile of cactus fruits (<i>Opuntia ficus-indica</i>) enriched cereal-based extrudates: Authenticity and impact of extrusion	(iii)
5.4. Flavonols, betacyanins content and antioxidant activity of cactus <i>Opuntia dillenii</i> fruits	(iv)
5.5. Technological characteristics and selected bioactive compounds of <i>Opuntia dillenii</i> cactus fruit juice following the impact of pulsed electric field pre-treatment	(v)
5.6. Impact of Pulsed Electric Fields, High Hydrostatic Pressure, and Thermal Pasteurization on Selected Characteristics of <i>Opuntia dillenii</i> Cactus Juice	(vi)
6. Brief discussion	53
7. Conclusion and outlook	62
8. References	68
