

# Contents

1 Introduction.....	1
2 State of the Art.....	4
2.1 Bone macro- and micro-structure, cells and remodeling .....	6
2.1.1 Cortical and trabecular bone .....	6
2.1.2 Bone cells.....	7
2.1.3 Remodeling.....	9
2.2 Bone at the nanoscale.....	11
2.2.1 Collagen .....	11
2.2.2 Minerals .....	13
2.2.3 Osteocyte network.....	16
2.2.4 Non-collagenous proteins (NCPs) and proteoglycans .....	17
2.3 Mineralization of bone at the micro- and nanoscale .....	18
2.3.1 Thermodynamics and phase transformations in mineralization.....	19
2.3.2 Cell-controlled mineralization .....	21
2.3.3 Mediators and inhibitors of mineralization.....	24
2.4 Role of the osteocytes in mineralization .....	27
2.4.1 <i>In vitro</i> models .....	27
2.4.2 <i>Ex vivo</i> models .....	28
2.5 Novel techniques for 3D imaging of the lacuno-canalicular network (LCN) within bone.....	29
2.5.1 Scanning electron microscopy-based 3D techniques (FIB-SEM and SBF-SEM) .....	30
2.5.2 Confocal laser scanning microscopy (CLSM) .....	35
2.5.3 X-ray micro-computed tomography ( $\mu$ CT).....	36
3 Materials and methods .....	38
3.1 Sample preparation .....	39
3.2 Measurement strategies.....	40

3.2.1 Environmental scanning electron microscopy (ESEM) for selection of forming osteons .....	40
3.2.2 Confocal laser scanning microscopy (CLSM) of the LCN within forming osteons .....	41
3.2.3 FIB-SEM measurements of the LCN in the unmineralized and the mineralized tissues .....	41
3.2.4 Comparison between CLSM and FIB-SEM techniques for imaging the LCN in forming osteons .....	43
3.2.5 Energy-dispersive X-ray spectroscopy (EDX) maps of the unmineralized and the mineralized tissues.....	45
3.3 Image processing .....	45
3.3.1 Alignment .....	47
3.3.2 Denoising .....	47
3.3.3 Destriping.....	47
3.3.4 Segmentation of the Haversian canal and the LCN .....	48
3.3.5 Distance transform of the image stacks with respect to the Haversian canal and the LCN.....	50
3.3.6 Data analysis; development of a correlation between the grey values of FIB-SEM images and distance maps .....	50
4 Results.....	55
4.1 Development of iodine staining for visualization of the unmineralized tissue .....	56
4.1.1 Preliminary test .....	57
4.1.2 Optimized protocol .....	58
4.1.3 Effect of laser irradiation on iodine staining of the unmineralized tissue.....	62
4.2 3D visualization of bone at the nanoscale.....	63
4.2.1 Selection of regions of interest (ROIs) using environmental scanning electron microscopy (ESEM) and confocal laser scanning microscopy (CLSM).....	64
4.2.2 FIB-SEM imaging of the forming osteons and 3D rendering of the LCN and the Haversian canal .....	65
4.2.3 Thresholding of the three phases of the forming osteon .....	67
4.3 The Haversian canal as a reference for mineralization of bone matrix.....	68
4.3.1 Quantification of unmineralized, transition and mineralized zones.....	69

4.3.2 Comparison between the Haversian canal probability density distribution (PDD) graphs of different samples .....	70
4.3.3 Normalization of the PDD graphs.....	72
4.4 The lacuno-canalicular network (LCN) as a reference for mineralization of bone matrix .....	72
4.4.1 Visualization of regions with the low, medium and high volume fraction of mineralized matrix (VFMM).....	73
4.4.2 Probability density distribution (PDD) graphs of the regions with low, medium and high VFMM .....	75
4.4.3 Course of mineralization with respect to the LCN.....	75
4.4.4 Degree of mineralization with distance to the canaliculi .....	77
4.5 Local orientation of mineralization foci and unmineralized collagen fibrils .....	78
5 Discussion .....	80
5.1 Unmineralized matrix formation.....	81
5.2 Formation and growth of mineralization foci .....	83
5.3 Role of the lacuno-canalicular network (LCN) on the early stage of mineralization .....	85
5.4 Foci orientation .....	90
5.5 Mineralized globules and the secondary stage of mineralization .....	91
5.6 Possible models for the early stage of mineralization in forming osteons.....	92
6 Conclusion .....	96
7 Outlook .....	100
8 Appendix.....	104
Bibliography .....	118
