Contents

1 Introduction **1**
- 1.1 Motivation . . . 1
- 1.2 Description of content . . . 4

2 Performance and control of solar thermal cooling systems **6**
- 2.1 Solar thermal cooling . . . 6
  - 2.1.1 Principle of solar thermal cooling . . . 6
  - 2.1.2 Main components . . . 7
- 2.2 Electrical performance . . . 14
  - 2.2.1 Solar thermal cooling systems . . . 14
  - 2.2.2 Solar adsorption cooling systems . . . 16
- 2.3 Control of solar cooling systems . . . 17
  - 2.3.1 Control approach . . . 18
  - 2.3.2 Literature review . . . 19
- 2.4 Conclusions . . . 23

3 Adsorption cooling with two beds adsorption chillers **24**
- 3.1 Adsorption cooling . . . 24
  - 3.1.1 Definitions . . . 24
  - 3.1.2 Adsorption equilibrium . . . 26
  - 3.1.3 Isosteric heat of adsorption . . . 27
  - 3.1.4 Heat and mass transfer . . . 29
  - 3.1.5 Adsorption cooling . . . 32
- 3.2 Two beds adsorption chillers . . . 35
  - 3.2.1 Chiller construction . . . 35
  - 3.2.2 Working principle . . . 36
  - 3.2.3 Heat recovery . . . 38
  - 3.2.4 Mass recovery . . . 40
  - 3.2.5 Combined heat and mass recovery . . . 42
- 3.3 Conclusions . . . 43

4 Model development **44**
- 4.1 Solar thermal collector . . . 44
  - 4.1.1 Literature review . . . 45
  - 4.1.2 Model description . . . 48
  - 4.1.3 Model improvement . . . 49
  - 4.1.4 Model validation . . . 52
- 4.2 Adsorption chiller . . . 55
  - 4.2.1 Literature review . . . 55

4.2.2 Assumptions . . . 58
4.2.3 Model description . . . 59
4.2.4 Model verification . . . 69
4.3 Closed wet cooling tower . . . 72
4.3.1 Introduction . . . 72
4.3.2 Literature review . . . 73
4.3.3 Model description . . . 74
4.3.4 Model validation and improvement . . . 80
4.4 Conclusions . . . 86

5 Chiller performance analysis 87
5.1 Steady state performance . . . 88
5.1.1 Definitions and boundary conditions . . . 88
5.1.2 Adsorption/desorption duration . . . 89
5.1.3 Heat recovery . . . 93
5.1.4 Mass recovery and combined heat and mass recovery . . . 103
5.2 Chiller characterization . . . 110
5.2.1 Performance map . . . 110
5.2.2 Characteristic equations . . . 113
5.3 Cycle time control in operation . . . 125
5.3.1 Methodology . . . 125
5.3.2 Control strategies . . . 127
5.3.3 Results and discussion . . . 128
5.4 Conclusions . . . 133

6 System control optimization 135
6.1 Methodology . . . 135
6.1.1 Climate data and cooling load . . . 136
6.1.2 Systems definition . . . 137
6.1.3 Control strategies . . . 140
6.1.4 Performance figures . . . 149
6.2 Daily analysis . . . 151
6.2.1 Hot sunny day . . . 152
6.2.2 Intermediate day . . . 169
6.3 Summer results . . . 179
6.3.1 Monthly analysis . . . 179
6.3.2 Overall cooling period . . . 185
6.4 Conclusions . . . 187

7 Conclusions and outlook 188
7.1 Conclusions . . . 188
7.1.1 Modelling . . . 189
7.1.2 Chiller performance . . . 190
7.1.3 System control . . . 191
7.2 Outlook . . . 192
7.2.1 Modelling . . . 192
7.2.2 Chiller performance . . . 193
7.2.3 System control . . . 193

Bibliography 194

A Adsorption equilibrium models for silica-gel RD 205

B Incidence angle modifier for beam radiation 206

C Solar adsorption cooling system of FESTO 209

D Models algorithms 213

E Models validation 223

F Adsorption chiller modelling 233

G Water thermophysical properties 250

H Cooling tower modelling 251

I Chiller performance map 259

J Characteristic equations for adsorption chillers 261

K Fitted simplified models 265

L Mixing valve modelling 267

M System model description 271

N Office building description 279

O Pumps power consumption 283

P Control algorithms 285

Q System control optimization - Intermediate day 288

R Contents of CD-ROM 292
