Contents

0 Symbols and Abbreviations III
1 Introduction 1
2 State of the Art 5
2.1 Fundamentals of Electrical Discharge Machining EDM 5
2.1.1 Material Removal Mechanism, Process Variants and Process Parameters 5
2.1.2 Applications and Development Trends of Die-Sinking EDM 8
2.2 Electrode Materials for Die-Sinking EDM 11
2.2.1 General Information on Electrode Materials and on Properties 11
2.2.2 Graphite 12
2.3 Influence of Graphite Electrodes on the Die-Sinking EDM 13
2.3.1 Wear Mechanism and Influence of Graphite Electrodes at EDM 13
2.3.2 Optimized Material Removal applying Graphite Electrodes 14
2.4 Flushing Mechanisms at Die-Sinking EDM 17
2.4.1 General Information on Flushing Mechanisms 17
2.4.2 Flushing through Vibration of the Tool Electrodes 18
2.5 Dressing of Tool Electrodes at Die-Sinking EDM 20
2.5.1 Introduction and Applications of the Dressing Technology 20
2.5.2 Dressing of Tool Electrodes for EDM 21
2.6 High Temperature Alloys 23
2.6.1 Introduction 23
2.6.2 Nickel-Base High Temperature Alloys 24
2.6.3 Nickel-Base Casting Alloy MAR-M247 26
2.7 Summary 27
3 Motivation, Objectives and Approach 29
4 Equipment and Materials 32
4.1 Machine Tool and Dielectric Fluid 32
4.2 Tool Electrode, Workpiece and Dressing Plate 34
4.2.1 Tool Electrode Material and Geometry 34
4.2.2 Workpiece Material 36
4.2.3 Dressing Plate Material 38
4.3 Measuring Equipment and Analysis Methods 42
4.3.1 Surface Roughness Characterization 42
4.3.2 Surface Layer Characterization and Metallographic Examination 43
4.3.3 Optical 3D Surface and Form Measurement System 44
4.3.4 Development of a Test Bench for the Determination of the Specific Electrical Resistance of Graphite Tool Electrodes 45
5 Process Optimization for Producing High Aspect Ratio Cavities 47
5.1 Introduction and Objectives 47
5.2 Pre-trials for Parameter Identification 48
5.3 Influence of Process Parameters 52
5.4 Influence of the Graphite Tool Electrode Material 78
6 Dressing of Graphite Tool electrodes 89
6.1 Introduction and Objectives 89
6.2 Tool Electrode Wear Pattern and Influence of the Process Parameters 93

6.2.1 Wear Pattern of Tool Electrodes 93
6.2.2 Technological Boundary Conditions 96
6.2.3 Determination of the Operating Points 98
6.2.4 Influence of the Dressing Process Parameters 101
6.2.5 Summary and Selection of Dressing Plates 120
6.3 Influence of Dressing Parameters on Process Results 123
6.3.1 Ultrafine Graphite 124
6.3.2 Fine Grained Cemented Carbide 126
6.4 Influence of the Workpiece Material and the Machining Depth 128
6.4.1 Ultrafine Graphite 128
6.4.2 Fine Grained Cemented Carbide 130
6.5 Integration of the Dressing Technology into an Automated Production Cycle 132
6.5.1 Conventional Dressing 134
6.5.2 Dressing with the Sacrificial Plate 147
7 Design and Validation of a Piezo-Mechanical System for Vibration-Assisted Die-Sinking EDM 154
7.1 Introduction and objectives 154
7.2 Design of the Piezo-Mechanical System 156
7.2.1 Specification of Technical Requirements 156
7.2.2 Dimensioning and Selection of Components 159
7.2.3 Final Design 164
7.3 Dynamic Characterization of the Piezo-Mechanical System 165
7.3.1 Dynamic Characterization on a Test Bench 165
7.3.2 Dynamic Characterization in the Machine Tool 167
7.4 Experimental Investigation on Vibration-Assisted Die-Sinking EDM 169
7.4.1 Influence of the Vibration Amplitude and Vibration Frequency 170
7.4.2 Influence of Tool Electrode Materials and Comparison to the Process without Vibrations 176
7.4.3 Influence on Surface Roughness and Surface Integrity 184
7.5 Computational Fluid Dynamics (CFD) Simulation 187
7.5.1 Fundamentals 187
7.5.2 Model Specification, Position of Tool Electrodes and Meshing 189
7.5.3 Simulation Results 191
8 Integrated Implementation of the Technologies and Statements for the Practical Application 197
8.1 Integrated Implementation of the Technologies 197
8.2 Statements for the Practical Application 201
9 Conclusions 204
10 List of References 209
Standards and Guidelines 217
