

Table of contents

List of figures	xvii
List of tables	xxiii
1 Introduction	1
1.1 The Network Management Dilemma	1
1.1.1 Challenges	2
1.2 The Point Of Interest	4
1.3 Thesis Organization	8
1.3.1 Self-x Network Management Category	8
1.3.2 Mobility Management in Flexibly Controlled Mobile Networks Category	10
1.4 Publications	12
References	13
I Self-x Network Management	15
2 Self-x Network Management Framework	17
2.1 Introduction	18
2.2 Self-x Network Management - An Overview	19
2.2.1 Author's perspective of self-x network management	20
2.3 Network Management Evolution	22
2.3.1 The dawn of Network Management	24
2.3.2 CORBA & The Age of Middleware	24
2.3.3 Web Technology takes over	25
2.3.4 Beginning of the Software Networks Era	25
2.3.5 The Future?	26
2.4 Enabling Technologies and Concepts	26
2.4.1 Network Knowledge Building	26
2.4.2 Ontological Approaches for ANM	27
2.4.3 Self-Organising Networks (SON)	30
2.4.4 Policy Based Network Management	32
2.4.5 Agent Based Network Management	33
2.5 Control Loop Stages Evaluation	35

2.5.1	Monitoring and Measurement Stage	35
2.5.2	Analysis and Decision Mechanism Stage	37
2.5.3	Learning Stage	38
2.6	Projects implementing Autonomic Network Management Vision	42
2.6.1	FOCALE	43
2.6.2	Self-Net EU FP7 Project	45
2.6.3	EFIPSANS EU FP7 Project	46
2.6.4	UniverSelf EU FP7 Project	48
2.6.5	SELFNET H2020 Project	49
2.6.6	Lessons Learned	50
2.7	Challenges	51
2.7.1	Achieving the right abstraction level	52
2.7.2	Concrete functional decomposition	52
2.7.3	Managing the Unknowns	53
2.7.4	Enabling Self-evolving characteristic	53
2.8	Design Goals	53
2.9	Self-x Network Management Architecture	54
2.9.1	Description of Hierarchical Layers	56
2.9.2	Objective Functions and their Potential Relationship	57
2.10	Self-x Network Management - Technical Perspective	65
2.10.1	Functional Components	65
2.10.2	Communication Model	68
2.10.3	Proposed Autonomic Software Agents	69
2.10.4	Design and Implementation of Intelligent Autonomic Agent	71
2.10.5	Realization of Mobile Agent	73
2.11	Objective Functions Translation Approach	74
2.12	Illustrative Use-Case for E2E Autonomic Network Management	77
2.13	Concluding Remarks	81
3	Multi-layer Multi-resolution Self-Learning Framework	83
3.1	Multi-layer self-learning mechanism	83
3.1.1	Incentive compatibility	86
3.1.2	Multi-layer Reverse Stackelberg	89
3.2	Speedup of Self-learning	90
3.2.1	Reverse Ishikawa-based speedup self-learning	90
3.2.2	Steffensen-based speedup self-learning	91
3.3	Concluding Remarks	94
4	Pre-5G Validation Framework for Self-X Network Management	95
4.1	Self-x Network Management Validation Framework	95
4.2	Control & Visualization Tool	97
4.2.1	Control & Visualization Tool Functionalities - An Overview	98
4.3	Virtualized Core and Transport Network	101

4.4	Network Simulator Components	101
4.4.1	OPNET Simulator	101
4.4.2	NeSSi ² Simulator	102
4.5	Ontology Model	104
4.6	Physical Testbed Component	106
4.6.1	Core and Last-mile Testbed	106
4.6.2	IPTV Service	107
4.6.3	UE Streaming and Visualization Tool	108
4.7	The Visualization & Control Android App	113
4.7.1	The Simulation Screen	113
4.7.2	The Results Screen	116
4.7.3	The Experiment Screen	116
4.8	Concluding Remarks	118
5	Results and Analysis	119
5.1	Olympic Games Scenario in Berlin - The Story Line	119
5.2	Stadium Area Scenario Scenes	121
5.2.1	Course of Events - A Technical Perspective	122
5.2.2	Performance Evaluation Metrics and Expected Results	123
5.2.3	Implementation Details of Stadium Area Experiments	124
5.2.4	Results and Analysis of Stadium Area Experiments	133
5.3	Scenario Dynamics in Scenes For Market Area	139
5.3.1	Course of Events - A Technical Perspective	139
5.3.2	Performance Evaluation Metrics and Expected Results	142
5.3.3	Implementation Details of Scene M-1	143
5.3.4	Performance Analysis of Scene M-1	144
5.3.5	Implementation Details of Scene M-2	150
5.3.6	Performance Analysis of Scene M-2	152
5.3.7	Implementation Details of Scene M-3 (Emulation Mode)	157
5.3.8	Performance Analysis of Scene M-3 (Emulation Mode)	157
5.3.9	Implementation Details of Scene M-3 (Physical Testbed Mode)	159
5.3.10	Performance Evaluation of Scene M-3 for Physical Testbed	162
5.4	Concluding Remarks	168
II	Mobility Management in Flexibly Controlled Mobile Networks	169
5.5	Introduction	171
5.6	Studying the Mobility Management in SDNized Networks	173
5.7	Theoretical Framework for Flexible Control of Future Networks	173
5.7.1	Random Matrix Games	173
5.7.2	Risk Sensitive Learners	174
5.7.3	Partially observable Markovian Decision Process (POMDP) based Mobility Modeling in UCN Environment	174

5.7.4	Design and Development of a Validation Framework	174
5.7.5	Distributed Mobility Management (DMM) in SDNized WLAN	175
5.8	Proactive Mobility Management in SDNized Networks	175
5.8.1	Delegated Control Approaches for Mobility Management	175
6	Mobility Management in SDNized Networks - The Trends	176
6.1	Introduction	177
6.2	Background and Related Surveys	177
6.2.1	Software Defined Networking	177
6.2.2	Mobility Management	179
6.2.3	Network Densification	180
6.2.4	Taxonomy of SDN Surveys	180
6.3	SDNized Wireless Networks	186
6.3.1	SDNized Wireless and Mobile Networks - A Broad Description	187
6.3.2	Evolution of Research on SDN in Wireless and Mobile Networks	188
6.3.3	Challenges in the SDNization of Wireless and Mobile Networks	188
6.4	Mobility Management in SDNized Wireless and Mobile Networks	189
6.4.1	Challenges Specific to MM & ND in SDNized Networks	190
6.4.2	Survey of SDN-based Mobility Management approaches	191
6.4.3	Research Focus on Generic Domain	191
6.4.4	Research Focus on LTE EPC Domain	196
6.4.5	Research Focus on RAN Domain	201
6.5	Pitfalls to avoid & Design Guidelines	203
6.5.1	Avoidable Pitfalls in SDNized wireless networks research	203
6.5.2	Architecture Design Guidelines	204
6.5.3	Protocol-Specific Guidelines	206
6.6	Research Guidelines	206
6.7	Conclusion	208
7	Theoretical Frameworks for Flexible Mobility Management	209
7.1	Random Matrix Games	209
7.1.1	Zero-Sum Random Matrix Games	211
7.1.2	NonZero Sum Random Matrix Games	212
7.1.3	Dynamic Random Matrix Games	214
7.1.4	Random Poly-Matrix Games	217
7.1.5	Numerical investigation	218
7.2	Risk Sensitive Learners in Network Selection Paradigm	220
7.2.1	Frequency selection	222
7.2.2	Relevant Studies	230
7.3	Mobility Management in User Centric Networking (UCN) Environment	231
7.3.1	Background on POMDP	233
7.3.2	Relevant Studies	234
7.3.3	Mobility Prediction in UCN	235

7.3.4	Software Architecture	239
7.3.5	Experiments and Test Results	240
7.4	Conclusion	241
8	Validation Framework for Flexible Control of Future Networks	242
8.1	Objectives	242
8.2	Operational Modes of the Validation Framework	244
8.2.1	Emulation Mode	244
8.2.2	Physical Testbed Mode	246
8.2.3	Experimental Environments	248
8.2.4	Developed Tools and Software Modules	249
8.3	Mobility Management - A Use-Case Scenario Implementation	255
8.3.1	Mobility Handling in Developed Testbed	256
8.4	Conclusion	259
9	Distributed Mobility Management in SDNized WLANs	260
9.1	Introduction	260
9.2	Background	262
9.2.1	SDNized Wireless Networks	262
9.2.2	Mobility Management in SDN	263
9.2.3	OpenFlow	263
9.3	Distributed Mobility Management Approach on SDNized Wireless Networks	264
9.4	Delay Cost Budget Evaluation	265
9.5	Implementation of SDNized WLAN	266
9.6	Delay Cost Budget Measurement - The Technical Perspective	267
9.7	Results and Analysis	269
9.7.1	Unmeasured Delay	271
9.8	Conclusion	271
10	Proactive Mobility Management in SDNized Networks	272
10.1	Introduction	272
10.1.1	Relevant Approaches	273
10.2	Proactive Flow Management Framework in SDNized Networks	275
10.2.1	Model and Assumptions	276
10.2.2	Learning Algorithm	276
10.3	Experimental Results and Analysis	279
10.3.1	Testbed Details	280
10.3.2	Results Analysis	282
10.4	Conclusion	283
11	On Further Improvements in Mobility Management of SDNized Networks	284
11.1	Introduction	284
11.2	Efficiency in SDNized Mobility Management - The Enabling Approaches	287
11.2.1	Preemptive Mobility Management	287

11.2.2 Delegated Control	290
11.3 Conclusion	298
12 Concluding Remarks and Future Prospects	299
