

Table of contents

	Abstract	i
	Zusammenfassung	ii
	Abbreviations	iii
	Table of contents	vii
I.	Introduction	1
I.I.	The thyroid gland	1
I.I.I.	Anatomy of the thyroid gland	1
I.I.II.	Organogenesis of the thyroid gland	3
I.I.III.	Key transcription factors for thyroid development	4
I.I.IV.	The hypothalamus-pituitary-thyroid axis	7
I.I.V.	Thyroid hormone influence on target cells	9
I.I.VI.	Physiology and function of the thyroid gland	10
I.I.VII.	Thyroid hormone biosynthesis and its functional markers	11
I.I.VIII.	Thyroid-associated diseases	15
I.II.	Cell culture systems for in vitro thyroid research	17
I.II.I.	Monolayer and three dimensional (3D) thyrocyte cell culture	17
I.II.II.	Pluripotent stem cells in thyroid research	19
I.II.III.	Tissue engineering and organ-on-a-chip systems as a bridge between basic and applied science	20
II.	Objective	23
III.	Materials & Methods	24
III.I.	Materials	24
III.I.I.	Cell sources	24
III.I.II.	Cell culture medium, cell culture reagents and supplements	24
III.I.III.	Buffers and reagents	25
III.I.IV.	Disposables	25
III.I.V.	Additional equipment for thyrocyte isolation	26
III.I.VI.	Antibodies	27
III.I.VII.	Kits	28
III.I.VIII.	RT-qPCR Primer	28
III.I.IX.	Multi-Organ-Chip Materials	29
III.I.X.	Instruments	30
III.I.XI.	Software	31
III.II.	Methods	32
III.II.I.	Primary human thyrocyte isolation and cell culture	32
III.II.II.	Passaging of thyrocytes	33
III.II.III.	Cell counting	33
III.II.IV.	Approaches for 3D cultures of primary human thyrocytes	34
III.II.IV.I.	96-well ULA 3D cultures	34

III.II.IV.I.I.	Co-culture with thyroid-derived fibroblasts (TdF)	34
III.II.IV.I.II.	Co-culture with endothelial cells (EC)	34
III.II.IV.II.	6-well ULA 3D cultures	34
III.II.IV.II.I.	3D floating culture in 6-well ULA	34
III.II.IV.II.II.	3D culture of single cells in Matrigel™	35
III.II.IV.II.III.	3D culture of spheroids in Matrigel™	35
III.II.IV.II.IV.	3D co-culture of thyrocytes with endothelial cells in 6-well ULA	35
III.II.IV.II.V.	3D co-culture of thyrocytes with endothelial cells and thyroid-derived fibroblastoid cells in 6-well ULA	36
III.II.V.	Processing and analysis of samples	36
III.II.V.I.	RNA isolation and reverse transcription	36
III.II.V.II.	Semi-quantitative transcriptomic analysis	36
III.II.V.III.	Preparation of cryosections	37
III.II.V.IV.	Hematoxylin & Eosin staining	37
III.II.V.V.	Immunofluorescence stainings	38
III.II.V.VI.	Flow cytometric analysis of endothelial cells	39
III.II.V.VII.	High content analysis	39
III.II.VI.	Multi-Organ-Chip fabrication and thyroid-on-chip culture	39
III.II.VII.	Statistical analysis	41
IV.	Experimental overview	42
V.	Results	43
V.I.	Characterization of isolated primary human thyrocytes	43
V.II.	Morphology of monolayer thyrocyte culture in vitro	45
V.III.	Characterization of passage 4 monolayer thyrocytes	46
V.IV.	Dedifferentiation of primary human thyrocytes in vitro	48
V.V.	Culture of human adult thyroid follicles in a microfluidic device	49
V.VI.	General 3D culture approaches with human adult thyrocytes	50
V.VII.	3D culture approaches in 96-well format	52
V.VII.I.	3D Co-culture with thyroid-derived fibroblastoid cells in 96-well	52
V.VII.II.	3D culture with endothelial cells in 96-well	54
V.VIII.	3D culture approaches in 6-well ULA	59
V.VIII.I.	3D co-aggregation of thyrocytes with TdF	59
V.VIII.II.	Sequential addition of TdF to 3D thyrocyte cultures	61
V.VIII.III.	3D culture of thyrocytes embedded in Matrigel™ versus floating 3D cultures in 6-well	62
V.VIII.IV.	3D culture of pre-aggregated thyrocytes in co-culture with ECs in 6-well	64
V.VIII.V.	3D co-culture of thyrocytes with endothelial and fibroblastoid cells in the presence of Matrigel™	66
VI.	Discussion & Conclusion	70
VI.I.	Characterization of adult human thyrocytes	70
VI.II.	Evaluation of human thyroid follicles in the 2-organ-chip platform	73
VI.III.	Human adult thyrocytes in 3D culture	74
VI.III.I.	Evaluation of the 96-well format 3D culture approaches	74

VI.III.II.	Evaluation of 6-well 3D culture approaches	76
VII.	Perspectives	80
VIII.	References	81
IX.	List of figures	87
X.	List of tables	88
