Table of contents

1. Introduction **29**

1.1. Bioengineering characterization and computational fluid dynamics 29

1.2. Scope of this thesis 30

1.3. Delimitations 32

2. Fundamentals **33**

2.1. Bioreactors 33

2.2. Bioengineering characterization 35

2.2.1. Turbulent flow 35

2.2.2. Specific power input 36

2.2.3. Energy dissipation rate and Kolmogorov length scale 37

2.2.4. Mixing time 38

2.2.5. Oxygen transfer 38

2.3. Scale-up of bioprocesses 40

2.4. Computational fluid dynamics 41

2.4.1. Single-phase systems and turbulence modeling 42

2.4.2. Continuous two-phase systems 46

2.4.3. Disperse two-phase systems 48

2.4.4. Error estimation 50

2.4.5. Software and geometry generation 51

2.4.6. Hardware 53

2.4.7. Validation 55

2.5. Shape optimization 57

2.6. Human embryonic kidney cells 58

3. Case study 1: Kolmogorov length scale for the characterization of bioreactors **61**

3.1. Material and methods 62

3.1.1. Motion capturing 62

3.1.2. Modeling complex geometry 62

3.1.3. Computational fluid dynamics 63

3.1.4. Validation and comparison . . . 65
3.2. Results and discussion . . . 65
3.2.1. CELL-tainer motion . . . 65
3.2.2. Mesh generation and study . . . 67
3.2.3. CFD simulations . . . 71
3.3. Conclusions . . . 82

4. Case study 2: Kolmogorov length scale for bioprocess optimization and prediction 83
4.1. Material and methods . . . 84
4.1.1. Computational fluid dynamics . . . 84
4.1.2. Particle image velocimetry . . . 86
4.1.3. Cultivation . . . 87
4.2. Results and discussion . . . 89
4.2.1. CFD for shake flasks . . . 89
4.2.2. Cultivations in shake flasks . . . 92
4.2.3. Motion capturing and CFD for 1 DOF wave-mixed bioreactors . . . 96
4.2.4. Cultivations in 1 DOF wave-mixed bioreactors . . . 100
4.2.5. CFD for stirred bioreactors . . . 102
4.2.6. Cultivations in stirred bioreactors . . . 106
4.3. Conclusions . . . 111

5. Case study 3: Kolmogorov length scale as a scale-up criterion 112
5.1. Material and methods . . . 113
5.1.1. Computational fluid dynamics . . . 114
5.1.2. Optimization process . . . 115
5.1.3. Cultivations for biological evaluation . . . 117
5.2. Results and discussion . . . 118
5.2.1. Optimization with CFD . . . 118
5.2.2. Biological verification . . . 123
5.3. Conclusions . . . 126

6. Conclusions and outlook 127
